ALLERGEN CONTROL POLICY

Dear Valued Customer,

BakeMark's Allergen Control policy requires allergen-containing ingredients to be stored segregated to prevent any cross-contamination with other materials. Additionally, allergens containing raw materials and products are stored below non-allergens.

At product changeover, an allergen wash is performed, and ATP swabbing is done to verify proper cleaning before releasing the line.

Food allergen awareness training is provided to employees upon hire with refresher training done annually.

Best Regards,
Dhurpatti Keogh
Regional Quality Director
